Meet the new Shelby Mustang Mach-E GT, our first production EV and available only in Europe. Shelby American is honoring the 100th anniversary of our visionary founder's birth with a post-title package for current generation European Ford Mustang Mach-E GT electric vehicles. Based on the Ford Mustang Mach-E GT, the Shelby package modifies the electric all-wheel drive vehicle to enhance the SUV's handling and styling.

As our first foray into production electric vehicles, we spent a great deal of time testing EV's on the track to understand their unique handling dynamics. Based on that experience, we lowered the SUV over an inch, cut weight off the top, reduced rotating mass to enhance stability.

Only 100 of the packages will be offered in Europe for the Carroll Shelby Centennial. They will be available to retrofit privately-owned 2021-2023 model year Mustang Mach-E GT SUV's or can be added to a new vehicle by a Shelby American dealer in select European countries within the 2023 calendar year.
